

SECURE CLOUD SOLUTIONS TO ADDRESS YOUR MOST CHALLENGING PROBLEMS

DEVELOPMENT

- Migrate to a containerized architecture hosted on open source Kubernetes platform

OPERATIONS

- Secure hosting with continuous security monitoring and logging

SECURITY

- Container hardening, vulnerability scanning, and ATO documentation

CI/CD PIPELINES

- Automated build, scanning, and deployment across multiple environments

ARA applies advanced data fusion and joint analysis by leveraging DevSecOps and cloud platforms for big data management, collaborative analysis, and decision support to enhance situational awareness and response coordination.

Our DevSecOps team has experience building CI/CD pipelines using proven technology and tools. We have built automated pipelines for the Air Force and Intelligence Community and tailored these tools to developer needs. Our platforms bridge on-premise test systems with secure cloud platforms.

CONTINUOUS

Code is built, tested, and deployed multiple times a day using automated pipelines.

RELIABLE

Releases are guaranteed to have completed automated security scanning, testing, and a stable build process.

CONSISTENT

Consistent deployment across development, staging, and production environments using CAPO and its optional air-gapped support.
